- Multichannel USB audio interface mixer**
- Up to 4 microphones in the meeting room**
- Flexible microphone and headset options**
- Powered speaker option**
- Includes hardware, training, and support**

Adapt To New Recording Requirements

The HA4 Hybrid Audio Kit makes it easy to record in a wide variety of meeting settings. Count on reliable, accurate recording of all participants, whether they are in-person or participating online.

- On-site - Up to 4 Microphones
- Remote - Any Online Conference
- Hybrid - In-Person and Online

Multichannel Clarity

Option for connecting up to four microphones using the included Focusrite USB Audio Interface. A powered speaker plays the audio from the conference call to the local participants. Each microphone is recorded on a separate track for maximum clarity. Remote participants are recorded to another channel directly from the online conference call.

Multichannel microphone audio ensures remote participants can hear local participants clearly.

Online Conference Calls

Support traditional on-site meetings and legal proceedings, remote conference calls, or a hybrid mixture of local and online participants.

Example Microphone Options

The hypercardioid microphone and desktop stand option is for recording a single participant on their own channel.

The conference-style microphone with 180 degree pickup is for recording several participants sitting at a table.

Training and Support

Includes training and remote installation support for fast deployment, ongoing technical support for reliability and efficiency.
