

Multi-Channel Server

Multi-Channel Recording Server is a system for recording that can be customized with features needed for more advanced recording applications.

SoniClear Multi-Channel Recording Server can be configured as a desktop system in a tabletop case, as a mobile system in a portable case, or as a rackmount system for installation in a control room.

Multi-channel audio recording is accomplished using a USB microphone mixer interface or Dante audio capture through Ethernet. Microphone options include a number of wired and wireless microphones to cover a wide variety of recording requirements.

The Recording Server can be purchased with the choice of Gov Recorder 10, Court Recorder 10, or Interview Recorder 10 software.

Customizable for a variety of advanced recording applications
