

## PRO 44 Microphone

**Audio Technica Pro 44** is ideal for capturing speech from multiple participants seated closely together. Its small, sleek design ensures low visibility.

**Audio Technica Pro44** microphone is ideal for capturing multiple participants who are sitting near each other. The low profile conference-style microphone design captures audio over a 180 degree area in front of the microphone, while rejecting speaking or noise from behind.

Example applications include recording board members sitting at a table or dais, or attorneys at a courtroom desk. It is also useful for recording opposing participants who are facing each other at a conference table (such as in a deposition), or when there is noise, such as an audience at a meeting, that needs to be reduced for best sound quality.

180+ degree sound capture in front of mic.

For use in:  
board meetings  
depositions  
conference tables  
court rooms
